Plenary talks ..... 5
Dave Kung ..... 5
Jeffrey Shallit ..... 6
Michael Newton ..... 7
Students Talks Schedule ..... 8
Session 1 ..... 9
Session 2 ..... 10
Session 3 ..... 11
Session 4 ..... 12

## Schedule

| Friday, 25 October 2019 |  |  |
| :---: | :---: | :---: |
| Time | Event | Location |
| 10:00-17:30 | Registration | 1st floor CS Goldberg bldg |
| 11:30-12:00 | Programming Competition Meeting | Auditorium rm127, CS Goldberg bldg |
| 12:00-17:00 | Programming Competition | Labs 134 and 143, CS Goldberg bldg |
| 13:30-17:30 | Registration (2nd desk) | Room 117 (in front), Dunn building |
| 14:00-17:00 | Mathematics Competition | Room 117, Dunn building |
| 14:45-15:45 | Joint Committee Meeting | Slonim rm430, CS Goldberg bldg |
| 16:00-17:00 | CS Committee Meeting | Slonim rm430, CS Goldberg bldg |
| 16:00-17:00 | Math Committee Meeting | Auditorium rm127, CS Goldberg bldg |
| 17:30-19:00 | Pizza Party | Atrium 1st floor, Rowe building |
| 19:00-19:30 | Sponsor Presentations or "Fun Activities" | Potter Auditorium rm1028, Rowe building |
| 19:30-20:30 | Blundon Lecture (Math) <br> Dave Kung <br> University of Maryland | Potter Auditorium rm1028, Rowe building |
| 20:30-21:30 | Reception | Atrium 1st floor, Rowe building |

| Saturday, 26 October 2019 |  |  |
| :---: | :---: | :---: |
| Time | Event | Location |
| 08:30-17:00 | Registration | Atrium 1st floor, Rowe building |
| 09:00-10:30 | Contributed Talks | Rooms 1007, 1011, 1014, 1016, Rowe building |
| 10:30-11:00 | Coffee Break | Atrium 1st floor, Rowe building |
| 11:00-12:00 | Sedgwick Lecture (CS) Jeffrey Shallit University of Waterloo | Potter Auditorium rm1028, Rowe building |
| 12:00-13:30 | Lunch Break | Atrium 1st floor, Rowe building |
| 13:30-15:00 | Contributed Talks | Rooms 1011, 1014, 1016, 1020, Rowe building |
| 15:00-15:30 | Coffee Break | Atrium 1st floor, Rowe building |
| 15:30-16:30 | Fields Lecture (Stat) Michael Newton University of Wisconsin | Potter Auditorium rm1028, Rowe building |
| 16:30-16:40 | Break | Atrium 1st floor, Rowe building |
| 16:40-17:35 | Contributed Talks | Rooms 1011, 1014, 1016, 1020 Rowe building |
| 19:00-21:00 | Banquet and Awards | The Westin Nova Scotian hotel, 1181 Hollis Street, Halifax |
| Sunday, 27 October 2019 <br> IS Session on Hopf Algebras and Tensor Categories Rowe building |  |  |
| Time | Event | Location |
| 08:30-10:00 | A. Introductory Overview Talks | Room 1020 Rowe building |
| 10:00-10:30 | Coffee Break | Atrium 1st floor, Rowe building |
| 10:30-12:30 | B. Research Talks | Room 1020 Rowe building |

# Plenary talks 

Dave Kung

University of Maryland

Bio: Dave Kung fell in love with both mathematics and music at a very early age. More successful with one than the other, he completed three degrees from the University of Wisconsin Madison, none in music, before joining the faculty at St. Mary's College of Maryland. He enjoys playing violin with students, in the local community orchestra, and with his daughter. He has authored a variety of articles on topics in harmonic analysis and mathematics education, and is the recipient of numerous awards including the 2006 Teaching Award and 2017 Service Award from the MD/VA/DC section of the MAA. His Great Courses lectures, How Music and Mathematics Relate, have quickly become a top Math \& Science seller for the Teaching Company. He serves as director of MAA Project NExT, a professional development program for new faculty in the mathematical sciences.

## Title: Harmonious Equations: An Exploration of Math \& Music

#### Abstract

Mathematics and music seem to come from different spheres (arts and sciences), yet they share an amazing array of commonalities. We will explore these connections by examining the musical experience from a mathematical perspective. The mathematical study of a single vibrating string unlocks a world of musical overtones and harmonics-and even explains why a clarinet plays so much lower than its similar-sized cousin the flute. The brain recognizes harmonics and other musical patterns, the same way it recognizes numerical patterns. However, errors in its pattern recognition lead to auditory illusions, ways to trick the brain into hearing something that isn't that. Finally, abstract algebra gives modern language to the structures beneath the surface of Bach's magnificent canons and fugues. Throughout the talk, mathematical concepts will come to life with musical examples played by the speaker, an amateur violinist.

# Jeffrey Shallit 

University of Waterloo

Bio: Jeffrey Shallit is Professor of Computer Science at the University of Waterloo, in Ontario, Canada. He received his Ph. D. in mathematics from the University of California, Berkeley in 1983, under David Goldschmidt and Manuel Blum. He taught at the University of Chicago and Dartmouth College prior to his present position. He has published over 225 papers in automata theory, combinatorics on words, formal languages, algebra, algorithms, computer graphics, history of mathematics, and number theory. He has written four books: Algorithmic Number Theory (with Eric Bach, MIT Press, 1996); Automatic Sequences (with Jean-Paul Allouche, Cambridge, 2003); A Second Course in Formal Languages and Automata Theory (Cambridge, 2009); and Neverending Fractions (with Jonathan Borwein, Alf van der Poorten, and Wadim Zudilin (Cambridge, 2014).

## Title: Additive Number Theory via Automata

#### Abstract

Lagrange's theorem -- every non-negative integer is the sum of 4 squares of integers --- is probably the most celebrated of the classical results in additive number theory: the study of the additive properties of sets of integers. Recently there has been some interest in the additive properties of integers that are defined by their expansions in some base. For example, we could consider numbers whose base-10 expansion is a palindrome (reads the same forwards and backwards, like

12321).

Banks proved that every positive integer is the sum of at most 49 base-10 palindromes, and the "49" was improved to 3 by Cilleruelo, Luca, and Baxter. But they were unable to find results for bases 2, 3, and 4.
In this talk I will discuss how we were able to prove results about this problem in a new way, using ideas from theoretical computer science. We built automata (finite-state machines) that recognize the expansions of numbers that are the sums of palindromes, and then used a very general decision procedure to determine whether every sufficiently large number had such a representation.

# Michael Newton 

University of Wisconsin

Bio: Michael Newton is Professor at the University of Wisconsin Madison, in the Departments of Statistics and of Biostatistics and Medical Informatics (BMI). He recently became chair of BMI, and has worked at UW since completing his PhD in Statistics at the University of Washington in 1991. His undergraduate training was in mathematics and statistics at Dalhousie University. Dr. Newton's research concerns computational statistics, high-dimensional inference, and the development of statistics in the biological sciences, and he has been fortunate to collaborate with others in multi-disciplinary projects. With colleagues and students, Dr. Newton reported the first application of Markov chain Monte Carlo in phylogenetic analysis and the first use of mixture models for analyzing high-dimensional gene expression changes. His work has advanced statistical models in various domains, including: cancer-genomic aberrations, gene-function analysis, RNA interference, and the biology of cancer initiation. Dr. Newton has long been interested in Bayesian and empirical Bayesian computations, and recently resolved a general ranking problem in this domain. Further details may be found at http://www.stat.wisc.edu/~newton/

## Title: Bayesian inference by example in computational biology

#### Abstract

Bayesian inference is a general data-analysis strategy that has proven effective in many application domains for extracting useful judgements, parameter estimates, uncertainty statements, predictions, and the like from potentially complicated data sources. It works by elaborating the observed data with some mathematical specification about how that data might have arisen. Probability models, which are central to this specification, express the structure of systematic and random sources of variation, and then inference follows by deploying the rules of probability conditional upon the data. Compared to other forms of statistics, Bayesian inference is especially compelling, although computationally challenging, when we are reasoning about a large number of unknown but related parameters, or when different kinds of data sets on the same basic objects are available, and thus with high-dimensional tasks or data integration tasks it can be very effective. I will review the basic structure of Bayesian inference using examples from computational biology.

## Students Talks Schedule

|  | SESSION 1 | SESSION 2 | SESSION 3 | SESSION 4 |
| :---: | :---: | :---: | :---: | :---: |
| 9:05-9:20am | Fredéric LeBlanc | Colin Vibert | Jennifer McNichol | Sarah Li |
| 9:25-9:40am | William TaylorMelanson | Joy Liu | Abby Anderson | Everett Patterson |
| 9:45-10:00am | Nicholas Barreyre | Ben Wang | Samantha Bardwell | Adam Lucas |
| 10:05-10:20am | Donné D'Arnall | John Marcoux | Lucas MacQuarrie | Dylan Ruth |
| 1:35-1:50pm | Yong Yu | Brady Ryan | Ellen McCole | Charles Gerrie |
| 1:55-2:10pm | Sarah Park | Kieran Bhaskara | Lawrence Daniel Doucett | Samuel Bauer |
| 2:15-2:30pm | Kethireni Ajith Kumar <br> Veera Raghavan | Jesse Preston | Graeme Zinck | Andrew Fraser |
| 2:35-2:50pm | Maryam Tajjeddin | Emily Wright | Syed Zeeshan Ahmed | Uyen Dao |
| 4:45-5:00pm | Samia Sifat | Caleb Jones | Mathieu Briedeau | Adam Smith |
| 5:05-5:20pm | Deepkumar Shah | Justin Hughes | Simon Gauvin | Youssef Zaazou |
| 5:25-5:40pm | Hardik Manek | Aaron Dwyer |  | Jeremy Peters |

Session 1

| $\begin{gathered} \hline \text { 9:05- } \\ 9: 20 \mathrm{am} \end{gathered}$ | Fredéric LeBlanc <br> Bounding the Complexity of Classes of Decision Trees |
| :---: | :---: |
| $\begin{gathered} \text { 9:25- } \\ 9: 40 \mathrm{am} \end{gathered}$ | William Taylor-Melanson <br> A Wearable System for Gait Phase Prediction and Interactive Movement Feedback |
| $\begin{gathered} \text { 9:45- } \\ \text { 10:00am } \end{gathered}$ | Nicholas Barreyre <br> Bitwise Conditional Controls Over Language Models for Music and Text |
| $\begin{gathered} \text { 10:05- } \\ \text { 10:20am } \end{gathered}$ | Donné D'Arnall Crop and Weed Stem Classification Using Recurrent Neural Networks |
| $\begin{gathered} \text { 1:35- } \\ \text { 1:50pm } \end{gathered}$ | Yong Yu <br> Alignment Historical Aerial Images using Machine Learning |
| $\begin{gathered} \text { 1:55- } \\ \text { 2:10pm } \end{gathered}$ | Sarah Park <br> Classification of Engraved Illustrations using a Statistical Machine Learning Approach |
| $\begin{gathered} \text { 2:15- } \\ 2: 30 \mathrm{pm} \end{gathered}$ | Kethireni Ajith Kumar Veera Raghavan Predict the Donor Journey Using Deep Learning Models |
| $\begin{gathered} \text { 2:35- } \\ 2: 50 \mathrm{pm} \end{gathered}$ | Maryam Tajjeddin <br> Predicting Risk of Aggressive Responsive Behaviours among People Suffering from Dementia using Natural Language Processing (NLP) and Machine Learning (ML) |
| $\begin{gathered} \text { 4:45- } \\ \text { 5:00pm } \end{gathered}$ | Samia Sifat <br> Facial Expression Recognition and Morphing with Machine Learning |
| $\begin{gathered} \text { 5:05- } \\ \text { 5:20pm } \end{gathered}$ | Deepkumar Shah <br> Using Machine Learning in Cannabis Industry |
| $\begin{gathered} \text { 5:25- } \\ 5: 40 \mathrm{pm} \end{gathered}$ | Hardik Manek Credit Card Fraud Detection |

Session 2

| $\begin{aligned} & \hline \hline 9: 05- \\ & \text { 9:20am } \end{aligned}$ | Colin Vibert <br> One-sided simultaneous confidence intervals for one-way layouts with unequal variances |
| :---: | :---: |
| $\begin{gathered} \text { 9:25- } \\ \text { 9:40am } \end{gathered}$ | Joy Liu <br> Animal Risk Assessment and Disease Control |
| $\begin{gathered} \text { 9:45- } \\ \text { 10:00am } \end{gathered}$ | Ben Wang <br> Financial Data Exploration and Analysis for Stock Screening |
| $\begin{gathered} \text { 10:05- } \\ \text { 10:20am } \end{gathered}$ | John Marcoux <br> Total Variation Denoising of Diffusion MRI Images Using a Modified MongeKantorovich Norm |
| $\begin{gathered} \hline \text { 1:35- } \\ \text { 1:50pm } \end{gathered}$ | Brady Ryan <br> Evaluation of Designs and Statistical Methods Under Response-Dependent Two-Phase Sampling for Genetic Association Studies |
| $\begin{gathered} \text { 1:55- } \\ \text { 2:10pm } \end{gathered}$ | Kieran Bhaskara <br> Fractions with a twist: Continued fractions and polynomial Pell equations |
| $\begin{gathered} \text { 2:15- } \\ \text { 2:30pm } \end{gathered}$ | Jesse Preston Source-Sink Diffusion |
| $\begin{gathered} \text { 2:35- } \\ \text { 2:50pm } \end{gathered}$ | Emily Wright Diffusion with Multiple Sources and Sinks |
| $\begin{gathered} \text { 4:45- } \\ \text { 5:00pm } \end{gathered}$ | Caleb Jones <br> An Algorithm Approach to the Game of Surrounding Cops and Robbers on Graphs |
| $\begin{gathered} 5: 05- \\ 5: 20 \mathrm{pm} \end{gathered}$ | Justin Hughes <br> Delayed Cops and Robbers on Graphs |
| $\begin{gathered} 5: 25- \\ 5: 40 \mathrm{pm} \end{gathered}$ | Aaron Dwyer Domineering in Misère Play |

Session 3

| $\begin{gathered} \text { 9:05- } \\ \text { 9:20am } \end{gathered}$ | Jennifer McNichol <br> The Estimation of Calibration Coefficients in Quantitative Fatty Acid Signature Analysis |
| :---: | :---: |
| $\begin{gathered} \text { 9:25- } \\ \text { 9:40am } \end{gathered}$ | Abby Anderson <br> Modeling of spruce budworm population on a windy island |
| $\begin{gathered} \text { 9:45- } \\ \text { 10:00am } \end{gathered}$ | Samantha Bardwell <br> A Dynamic Individual-Based Model of a Population of People Who Inject Drugs |
| $\begin{gathered} \text { 10:05- } \\ \text { 10:20am } \end{gathered}$ | Lucas MacQuarrie <br> An Introduction to Mathematical Biology and Modelling of Tumour Development |
| $\begin{gathered} \text { 1:35- } \\ \text { 1:50pm } \end{gathered}$ | Ellen McCole <br> Benchmarking MDLR for OGI in the field in a way that doesn't directly involve CH4 release |
| $\begin{gathered} \hline \text { 1:55- } \\ \text { 2:10pm } \end{gathered}$ | Lawrence Daniel Doucett <br> SphereSkeltons: Sphere-mesh Fitting for Extracting Topologically Accurate Medial Skeletons from Point Clouds |
| $\begin{gathered} \text { 2:15- } \\ \text { 2:30pm } \end{gathered}$ | Graeme Zinck <br> Opacity in Modular Systems |
| $\begin{gathered} \text { 2:35- } \\ \text { 2:50pm } \end{gathered}$ | Syed Zeeshan Ahmed <br> Preserving consumer DNA privacy for finding relatives in a malicious two-party computation |
| $\begin{gathered} \text { 4:45- } \\ 5: 00 \mathrm{pm} \end{gathered}$ | Mathieu Briedeau <br> Improving heterogeneous distributed databases resiliency using fuzzy logic |
| $\begin{gathered} \text { 5:05- } \\ \text { 5:20pm } \end{gathered}$ | Simon Gauvin <br> Vizwik: Lessons Learned from the Design and Realization of a Visual Dataflow Language for the Web |

Session 4

| $\begin{gathered} \hline \text { 9:05- } \\ \text { 9:20am } \end{gathered}$ | Sarah Li <br> Towards a Finite Presentation of Unitary Dyadic Operators |
| :---: | :---: |
| $\begin{gathered} \text { 9:25- } \\ 9: 40 \mathrm{am} \end{gathered}$ | Everett Patterson <br> Using Linear Algebra in Quantum Enganglement Theory |
| $\begin{gathered} \text { 9:45- } \\ \text { 10:00am } \end{gathered}$ | Adam Lucas <br> A Look at Distributed Computing and Modal Logic |
| $\begin{gathered} \text { 10:05- } \\ \text { 10:20am } \end{gathered}$ | Dylan Ruth <br> Quantifier Elimination in Divisible Abelian Groups and Their Expansions |
| $\begin{gathered} \text { 1:35- } \\ 1: 50 \mathrm{pm} \end{gathered}$ | Charles Gerrie Multi-block analysis of Unixcrypt |
| $\begin{gathered} \text { 1:55- } \\ \text { 2:10pm } \end{gathered}$ | Samuel Bauer Recovering Matrix Algebras |
| $\begin{gathered} \text { 2:15- } \\ 2: 30 \mathrm{pm} \end{gathered}$ | Andrew Fraser <br> How Good is Your Approximation? - The Essential Role of Error Estimation and Control in Numerical Computation |
| $\begin{gathered} \text { 2:35- } \\ \text { 2:50pm } \end{gathered}$ | Uyen Dao On Scheffe's criteria |
